

Here is a detailed consolidated overview of the research areas of Economics professors at IIT Bombay based on the provided database and their recent publications and projects:

- **Prof. Aditi Chaubal**

Research areas: Nonlinear time series analysis, Macroeconomics, Monetary economics.

Key projects: District Strategic Plans for Pune and Palghar districts, Maharashtra government.

Recent work includes economic modeling of money demand stability with unknown break points, global liquidity effects on Indian financial markets and monetary policy, comparative evaluation of economic filters, nonlinear CAM models for exchange rates in India, studies on plutocratic bias in Indian CPI, and analyses of household cooking energy choices in rural India.

- **Prof. Neha Gupta**

Research areas: Applied Microeconomics, Behavioral and Experimental Economics, Applied Econometrics, Growth Theory.

Key works: Auction theory applied to grain markets in India, identification and estimation of loss aversion in auction experiments, government intervention in procurement policies, and welfare impacts of grain auction policies.

Publications cover effectiveness of price support auctions, loss aversion measurements, and auction impacts on farmer welfare.

- **Prof. Pintu Parui**

Research areas: Macroeconomic Theory, Growth and Distribution, Development Economics.

Recent publications focus on fiscal expansion and government debt effects on economic growth through post-Keynesian perspectives, worker household debt and income distribution, corporate debt and endogenous dividend instability, financialization's impact on technological change and wage gaps, modeling COVID-19 economic impacts in India, and government expenditure analyses aligned with economic growth.

- **Prof. Puja Padhi**

Research areas: Financial Economics, Applied Econometrics, Financing Economic Development, Macro Economics, Money & Banking.

Recent completed project: Anatomy of Price Volatility Transmission in Indian Vegetable Markets (RBI DRG Study).

Published works include household cooking fuel choices in India, efficiency of Indian banks (public vs. private), IPO underpricing determinants, loan demand by microfinance borrowers, financial market dynamics, and capital and risk studies in public and private banks.

- **Prof. Radeef Chundakkadan**

Research areas: Monetary Policy, Financial Markets, Firm Innovation.

Publications and projects cover firm automation and global value-chain participation, monetary policy effects on credit market discrimination, government support roles on e-commerce and firm innovation during pandemic crises, gender gaps in access to finance, COVID-19 stock market behavior, and monetary policy announcements' impact on stock returns.

- **Prof. Rama Pal**

Research areas: Health Economics, Education, Gender and Labour, Migration, Economic Geography.

Key projects: Educational Performance of children in tribal clusters of Maharashtra; Vaccine Preventable Disease interventions modeling with Bill & Melinda Gates Foundation support.

Publications include studies on learning disadvantages for first-generation learners, remittances and migration analysis from India, malnutrition inequality analyses in Maharashtra, and determinants of social sector expenditures.

- **Prof. Saptarshi Prosonno Ghosh**

Research areas: Behavioral Economics, Public Policy, Institutional Design, Game Theory, Applied Microeconomics, Political Economy, Development Economics.

Recent research includes studies on democracy and commercial media, committee decision-making with information leaks, reputational cheap talk, talent spotting in markets, optimal committee sizes under bias, and electoral misfortunes due to ideological advantage.

- **Prof. Souvik Banerjee**

Research areas: Health Economics, Applied Econometrics, Health Policy, Labour Economics, Pharmaceutical Economics.

Projects: Advancing Research Methods in Causal Inference using Latent Factor Models, Diseases and Interventions Modeling to Action Group (DIMAG) funded by Bill & Melinda Gates Foundation, Medicaid Plan impacts, and peer support technology for young adults with serious mental illness.

Publications cover virtual learning collaboratives, hospital readmission penalties and racial/ethnic health disparities, ambulance diversion effects, and quality of care under Medicare programs.

- **Prof. Subrato Banerjee**

Research areas: Experimental and Behavioural Economics, Empirical and Behavioural Industrial Organization, Applied Game Theory, Behavioral Finance, Development Economics, Applied Statistical Inference and Hypothesis Testing.

Selected studies address knowledge certainty reduction, fairness flexibility in focal points, monopoly and reference dependence, treatment effect inference, private moral calculus in economic agents, and relationships between cashless systems and savings behavior.

- **Prof. K. Narayanan**

Research areas: Development Economics, Energy Economics, Industrial Economics, International Business, Industry–Environment Linkages, Socio-Economic Impacts of Climate Change.

Author and editor of multiple books on globalization of Indian industries, productivity, exports, investment, human capital, agglomeration and technology clusters.

This collective overview demonstrates the breadth and depth of economics research at IIT Bombay, focusing on applied micro and macroeconomics, behavioral and experimental economics, monetary policy, health and education economics, development, finance, governance, and policy modeling across emerging and developed economy contexts.

If you want detailed summaries for any specific professor(s), please specify.
